In the Claims:

SW
H1

B3

1. (Amended) A display device comprising:
 - a substrate having an insulating surface;
 - at least one thin film transistor formed on said insulating surface, [e]
 - said thin film transistor having a semiconductor film comprising silicon as an active layer thereof;
 - an interlayer insulating film comprising an inorganic material formed on said thin film transistor;
 - a first contact hole in said interlayer insulating film;
 - a wiring formed on said interlayer insulating film and electrically connected to said thin film transistor through said first contact hole formed in said interlayer insulating film;
 - a leveling film comprising an organic resin to provide a leveled upper surface over said thin film transistor;
 - a second opening through said leveling film and said interlayer insulating film; and
 - a pixel electrode formed over said leveled upper surface and directly connected to said semiconductor film of said thin film transistor through said second opening,
- wherein an edge of said leveling film at a periphery of said second opening is rounded.
